Commiters Softwares

Technology Stack Overview

Generated: 7 August 2026

This document summarizes the technology stack used across the Commiters website monorepo (frontend, admin, backend, databases, and deployment).

1. Frontend (Public Website)

- **Framework** — React 18 with TypeScript
- **Build tool** — Vite
- **Routing** — React Router
- **Animation** — Framer Motion
- **Testing** — Vitest and Testing Library
- **SEO** — Sitemap generation, meta tags, structured data
- **CMS client** — Optional API-driven content with hardcoded fallbacks

2. Admin Panel (CMS UI)

- **Framework** — React with TypeScript
- **Build tool** — Vite
- **Auth** — JWT login against the backend API
- **Purpose** — Manage site content, jobs, media, and settings
- **Note** — Separate app from the public website

3. Backend (API)

- **Runtime** — Node.js
- **Framework** — Express with TypeScript
- **Validation** — Zod
- **Security** — Helmet, CORS, rate limiting
- **Auth** — JSON Web Tokens (JWT) and bcrypt password hashing
- **Email** — Nodemailer (SMTP)
- **PDF generation** — PDFKit for inquiry PDFs
- **Messaging** — Optional Twilio WhatsApp notifications
- **Uploads** — Multer for media uploads
- **Bundling** — esbuild for production API bundle

4. Databases

- **PostgreSQL** — Via Prisma (e.g. Neon or local Postgres) for application data
- **MongoDB** — Via Mongoose for CMS/admin content (hero, jobs, FAQs, etc.)

5. Project Structure

- **frontend/** — Public marketing website
- **admin/** — CMS admin panel
- **backend/** — Node.js API and CMS services
- **database/** — Prisma schema and migrations

6. Deployment & Infrastructure

- **Containers** — Docker (frontend served with Nginx; API on Node)

- **Hosting** — DCdeploy
- **Typical domains** — www.commiters.com (frontend), api.commiters.com (API)
- **CI/CD style** — Build from GitHub main branch

7. Summary

React/Vite frontend + Express/Node API + Prisma/PostgreSQL + Mongoose/MongoDB CMS, packaged with Docker and deployed on DCdeploy.
